

MLM Gelbvieh Open House - Private Treaty Sale

Hosted by

MLM Gelbvieh

Marlin Meyer
824 Road 3000
Superior, Neb. 68978
402-879-4976

E-mail: mlm68978@yahoo.com

Website: www.gelbviehbulls.com

Directions

Highway 14 and 136 junction
north of Superior, Neb.,
six miles west on 136, 1 1/4 miles north.

11 a.m. to 1 p.m.

Cattle viewing
Final bid at 1 p.m.

12:00 Noon

Lunch served

Discounts

\$50 per head for bulls picked up on day of sale.

Quantity Discount

1% - Two head 3% - Four head
2% - Three head 4% - Five or more head

Terms

When 1/2 of the total purchase price is paid at sale time, the balance will be carried forward interest-free until April 1. Total payment will be expected on bulls picked up sale day.

Delivery and Care Until April 1

Bulls purchased on sale day will be fed free of charge until April 1 at the purchaser's risk. Bulls may be fed after April 1 at the cost of \$4.00 per head per day. We'd be happy to discuss delivery of your bulls with you.

Semen Check and Guarantee

Each bull has been semen checked by Dr. Wulf from the Red Cloud Animal Health and guaranteed to settle healthy females.

Notes

First Breeding Season Guarantee

Buyers of all bulls injured during the first breeding season, will have credit at the next sale at the value of the purchase price minus salvage value. Contact MLM Gelbvieh promptly so the decision to return the bull to MLM Gelbvieh or to sell the bull by the buyer may be made. Breeding season is defined as the "90-day period following the first turnout of the bulls."

In the event of death of a bull during the first breeding season, a credit of 50% of the sale price will be applied at the next sale for a bull.

Bidding

Procedures for our Private Treaty Sale:

- When you have made your selections of bulls (prior to 1:00 p.m.) place your buyer's number on the card located on the pen for that lot or lots.

- At 1:00 p.m., the bulls with more than one buyer's number will be decided by private auction. The bulls with the most buyer numbers will be bid off first. The bidders will be announced.

- A deck of cards will be used to determine the order of bidding. Each bidder will select a card. The one with the highest card will own the bull IF the other bidders do not raise the bid on the base price. The person with the next highest card has the option to raise the price by \$100.00 if they desire. Every card holder will have a chance to raise the bid. This will continue until only one buyer remains, giving every buyer the same equal opportunity to buy any bull we have to offer.

- The unsuccessful bidders will have a few minutes to put their number on any other available bull. We recommend that you have your second choice in mind.

- The bid-offs will continue until all bulls having multiple bidders have been sold.

- If only one buyer number is on a bull - that person will own that bull at the base price listed.

- Bulls not sold on March 2nd will be available for sale private treaty and will be priced at that time.

AGA GE-EPDs

How Genomic-Enhanced EPDs Impact Bull Buying Decisions

American Gelbvieh Association's (AGA) Genomic-Enhanced EPDs (GE-EPDs) provide Gelbvieh and Balancer® breeders and their commercial producers the ability to more accurately identify young individuals with the right genetics needed to accelerate genetic improvement in their respective herds.

GE-EPDs result in more accurate EPDs for bulls and females two to four years sooner when compared to using pedigree and performance information alone. The information can be used to more accurately select sires that excel in feedlot and carcass traits or choose bulls that can be used on replacement heifers with increased confidence.

Bottom line, GE-EPDs allow bull buyers to make smarter, better informed bull and female buying decisions backed by more accurate EPDs. This saves time and money, reduces risk and accelerates the rate of genetic progress.

Contact the AGA to find out more about GE-EPDs by calling 303-465-2333 or visiting the AGA website at <http://www.gelbvieh.org/education/epdresearch/research.html>.

EPD Definitions In This Catalog

Listed below are the definitions of American Gelbvieh Association EPDs and the units in which they are published. The EPDs with an asterisk (*) next to the names are available to members only.

Calving Ease Direct (CE): Percent of unassisted births of a bull's calves when he is used on heifers. A higher number is favorable, meaning better calving ease. This EPD can be vital to a rancher looking to decrease the amount of calves pulled in his herd.

Milk (Milk): The genetic ability of a sire's daughters to produce milk expressed in pounds of weaning weight.

Calving ease maternal (CEM): Represented as percent of unassisted births in a sire's first-calving daughters. A higher number represents more favorable calving ease. This EPD is important to a rancher's bottom line because it predicts which animals produce daughters with a genetic pre-disposition to calve unassisted as heifers.

Heifer Pregnancy (HP): Predicts the probability that a bull's daughters will become pregnant as first-calf heifers in a regular breeding season, expressed as a percent. A higher value of this EPD is favorable, meaning that a higher percentage of a sire's daughters get pregnant as first calf heifers compared to other sires in his contemporary group.

30-Month Pregnancy (Pg30): Predicts the probability that a bull's daughters will become pregnant and calve at three years of age, given that they calved as first-calf heifers. This EPD is expressed as a percent, again, with a higher number being more favorable meaning a higher percentage of a sire's daughters will calve at three years of age, given they calved as first-calf heifers.

Stayability (ST): Predicts the genetic difference, in terms of percent probability, that a bull's daughters will stay productive within a herd to at least six years of age. The Stayability EPD is one of the best measures currently available to compare a bull's ability to produce females with reproductive longevity.

Growth Traits

Birth Weight (BW): Predicts the difference, in pounds, for birth weight of the calf.

Weaning Weight (WW): Predicts the difference, in pounds, for weaning weight (adjusted to age of dam and a standard 205 days of age). This is an indicator of growth from birth to weaning.

Yearling Weight (YW): Predicts the expected difference, in pounds, for yearling weight (adjusted to a standard 365 days of age). This is an indicator of growth from birth to yearling.

***Mature Weight EPD (MW):** Predicts the average difference in pounds of mature weight of a sire's progeny compared to their contemporaries.

Gelbvieh and Balancer® Breed Average EPDS
 (For non-parents, as of the Winter 2020
 International Cattle Evaluation)

Growth and Maternal EPDs

	CED	BW	WW	YW	MK	TM	CEM	HP	PG30	ST	DOC
Gelbvieh	12	0.2	61	87	20	50	6	6	1	15	12
Balancer®	13	-0.3	63	95	20	52	7	5	1	15	12

Intake and Carcass EPDs

	Intake and Carcass EPDs								Index Values		
	DMI	YG	CW	RE	MB	FT	ADG	RFI	SCow	FPI	EPI
Gelbvieh	0.013	-0.27	20	0.62	0.23	-0.05	-0.038	-0.012	106.65	70.78	62.73
Balancer®	0.027	-0.09	27	0.47	0.41	-0.01	0.004	-0.010	101.60	76.83	97.14

Carcass Traits

Yield Grade (YG): Differences in yield grade score, which is a predictor of percent retail product. Smaller values suggest that progeny will have a better lean to fat ratio.

Carcass Weight (CW): Differences in pounds of hot carcass weight, adjusted to an industry standard age endpoint.

Ribeye Area (REA): difference in ribeye area in inches between the 12th and 13th rib. Greater ribeye areas are preferable.

Marbling (MB): Predicts the differences in the degree of marbling within the ribeye as expressed in marbling score units. Greater marbling numbers are preferable and are an indicator of higher carcass quality grades.

Fat (FT): Differences for fat thickness, in inches, for a carcass over the 12th rib, smaller numbers of fat thickness are preferable as excess fat can be detrimental to yield grade.

Notes

Notes

**MLM Gelbvieh ranks
11th in the nation
as owner of
Dams of Merit and
Dams of Distinction.**

***Gelbvieh breeder recognized
for outstanding productivity***

***MLM Gelbvieh
Superior, Neb.***

was recently recognized by the American Gelbvieh Association (AGA) as the owner of 42 Gelbvieh cows exhibiting the consistent maternal efficiency typical of "The Continental Breed of Choice." The AGA has designated these outstanding beef females as Dam of Merit and Dam of Distinction.

Maternal productivity plays a major role in profitable beef production, as nearly 60 percent of the cost of producing a pound of beef can be attributed to the cow herd. Considerable economic research has demonstrated that fertility and calving ease followed by milk, growth and carcass cutability have the biggest influence on profit in a retained ownership (conception to carcass) system.

Commercial cattlemen agree that Gelbvieh have strong maternal attributes with the added benefits of fast growth and carcass cutability. Given the increased emphasis on efficient beef production, the Gelbvieh breed is in an excellent position to increase its influence on the beef industry.

The title "Dam of Merit" recognizes cows that meet strict selection criteria including early puberty and conception, regular calving intervals, and above-average weaning weights on at least three calves. Of the 39,235 active cows in the Gelbvieh breed, only 6 percent qualify for Dam of Merit. The "Dam of Distinction" honor recognizes cows that meet the same high standards for superior, long-term productivity with at least eight calves. Just 1.1 percent of all active Gelbvieh cows qualify for this elite group.

For more information on Gelbvieh cattle and AGA programs, contact the American Gelbvieh Association at 350 Interlocken Blvd. Ste 200, Broomfield, CO 80021, or telephone (303) 465-2333.
